5+ years	Team of 5	9 products	B.Sc. CE
software engineering	front-end engineers led	delivered to production	Iran Univ. of Science & Tech.

SUMMARY

Senior front-end engineer with **5+ years** building and leading **enterprise-scale web applications** in **Angular** and **React** with TypeScript, plus **full-stack Next.js / Node.js** delivery. As **Front-End Team Lead** I own the architecture, coding standards, code-review process and pre-release testing gates the team ships by. I work at the level of architecture and data contracts — not only UI — with a steady focus on scalable structure, reusable component systems and long-term maintainability.

SKILLS

Front-End	**Angular** (Standalone, Signals, OnPush), **React**, **Next.js**, **TypeScript**, JavaScript (ES2015+), **RxJS**, NgRx, HTML5, CSS3, Tailwind CSS, Angular Material, PrimeNG, PWA, Responsive Design
Back-End	Node.js, Express.js, Next.js (full-stack), REST API design, GraphQL, WebSockets, Server-Sent Events, Webhooks, Authentication & Authorization
Databases	SQL Server, PostgreSQL, MySQL, MongoDB
Tooling	Git, GitHub, Docker, Linux (Ubuntu), GraphQL Code Generator, D3.js, Three.js, Mininet
Practice	Software architecture, code review, coding standards, branch strategy, data modelling, business analysis, technical leadership, mentoring
AI-Assisted	Claude Code, Cursor, OpenCode, MCP (Model Context Protocol), Python for LLM tooling

EXPERIENCE

Front-End Team Lead — Jabiz Parda

Nov 2021 – Present

Enterprise web applications · Remote · ~5 years

- **Lead a front-end team of 5** on large enterprise applications, owning architecture from component structure and state management through to API contracts.
- **Established the team's coding standards and development process** — the shared baseline for how features are designed, built, reviewed and shipped.
- **Review every pull request** on its task branch, using code review as the main channel for mentoring and for keeping the codebase consistent.
- **Defined the merge gates:** task work reaches a feature branch only with an approved PR and all test cases passing; a feature reaches main only when complete.
- **Break each feature into reviewable units of work**, create the tasks and distribute them across the team so progress stays measurable.
- **Co-design data models and REST APIs** with back-end engineers, shaping contracts before implementation rather than consuming them after.
- **Own post-release feedback and defect triage** — accountable for the work after it ships, not at hand-off.
- **Delivered enterprise platforms with complex business rules**, including IMIDRO's national-scale suite (see Projects).

SELECTED PROJECTS

IMIDRO — Enterprise Platform Suite

Angular · TypeScript

Iranian Mines & Mining Industries Development and Renovation Organization

Large-scale platform for a national industrial organisation, with complex relationships across modules — each domain carrying its own business rules, data model and reporting. Domains delivered: **HSE**, **Energy**, **Planning & Scheduling**, **Productivity**, **HR** and an organisational **Phonebook**.

- Led **business analysis and solution design** for assigned modules, turning operational requirements into technical designs.
- Designed **data models and APIs** with back-end engineers, then built the front-end integration layer.
- Built the **front-end applications end to end** — architecture, reusable components, state management and features.

Jazireh & Tinaco — Machine-Parts Supplier Platforms

Angular · TypeScript

Private / commercial clients

- Implemented **role-based access for multiple user types**, with each role driving what is visible and permitted across the app.
- Built the **customer club** for rewarding returning customers and **sales management** for the commercial workflow.

Salary Slip Platform — Arman Carpet

Next.js · MongoDB

Full-stack · salary.arman-carpet.com

Payroll platform giving employees access to their salary slips. Built end to end — UI, API and data model.

Chelhesaran — Carpet E-Commerce Store

Next.js · MongoDB

Full-stack · chelhesaran.com

Online store for a Kashan carpet brand selling machine-made carpets direct to customers. Built end to end.

Invoice & Document Management

Next.js · MySQL

Full-stack · Product supply group

Local web application for managing a supply group's invoices and documents. Built end to end.

Avak · Tamland Junior · Karabiz — E-Learning

Angular · TypeScript

Jabiz Parda · avak.ir · jr.tamland.ir · karabiz.com

- **Avak** — structured learning platform for mothers of newborn children.
- **Tamland Junior** — learning platform for pre-school children, with an interface built for early readers.
- **Karabiz** — online academy of practical workplace skills for working professionals.

EDUCATION

B.Sc. Computer Engineering — Iran University of Science and Technology

2019 – 2025

IUST · Tehran, Iran

Thesis — Video Streaming over QUIC. Evaluated QUIC-based video streaming against HTTP-based DASH under varying network conditions, using a **Mininet on Linux** test environment to emulate them.

LOOKING FOR

- Senior Front-End Engineer or Front-End Lead
- **Remote or Hybrid** · flexible hours, any timezone

LANGUAGES

- **Persian** — Native
- **English** — Professional working proficiency (B2)
