Hessam Hosseini

Senior Front-End Engineer · Angular · React · TypeScript

Kashan, Iran (UTC+3:30) · Open to senior front-end & front-end lead roles · Remote or Hybrid

+98 936 183 0308 · shh2079@gmail.com · linkedin.com/in/hessamhosseini · github.com/shh79 · t.me/HessamHosseiniii · shh79.github.io/cv

SUMMARY

Software engineer with **5+ years of professional experience** building and leading enterprise-scale web applications, with the depth of that experience in **front-end development**. Specialised in **Angular** and **React** with TypeScript, with **full-stack Next.js** delivery across both front end and back end, backed by hands-on **Node.js / Express** work across REST API design, data modelling and real-time communication. As **Front-End Team Lead** I defined the coding standards, code review process and pre-release testing stage the team builds to. I work at the level of architecture and data contracts, not only UI — with a consistent focus on scalable structure, reusable component systems and long-term maintainability.

CORE TECHNICAL SKILLS

- **Front-End:** Angular, React, TypeScript, Next.js, JavaScript (ES2015+), RxJS, NgRx / State Management, HTML5, CSS3, Tailwind CSS, Angular Material, PrimeNG, Responsive Web Design, PWA, WebSockets, Server-Sent Events
- **Modern Angular:** Standalone Components, Signals, OnPush Change Detection, Reactive Patterns with RxJS, Modern Angular Architecture, Component Communication, Reusable UI Architecture
- **Back-End:** Next.js (Full-Stack), Node.js, Express.js, REST API Design, API Architecture, WebSockets, Webhooks, Authentication & Authorization
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB
- **Tools & Platforms:** Docker, Git, GitHub, GraphQL, GraphQL Code Generator, Three.js, D3.js, Linux (Ubuntu), Mininet, Network Emulation & Testing, API Integration, AI Coding Assistants
- **Engineering Practice:** Software Architecture, Code Review, Coding Standards, Feature Testing, Data Modelling, API Design, Development Process Design, Technical Leadership, Mentoring, Business Analysis

PROFESSIONAL EXPERIENCE

Front-End Team Lead — Jabiz Parda

Nov 2021 — Present · Remote · ~5 years

- **Led a front-end team of 5** on large enterprise web applications, owning architectural decisions from component structure and state management through to API contracts.
- **Decomposed each feature into smaller units of work**, created the corresponding tasks and assigned them across the team — keeping scope reviewable and progress measurable.
- **Reviewed and revised every developer's pull request** on its task branch, using review as the team's main channel for mentoring and for enforcing consistency.
- **Defined the merge criteria**: work reached the feature branch only once its pull request was approved **and** all test cases passed, and the feature branch reached main only once the feature was complete.
- **Owned post-release feedback and defect triage**, staying responsible for the work after it shipped rather than at hand-off.
- **Established the team's coding standards and development process**, giving the front-end team a consistent baseline for how features are designed, built and shipped.
- **Designed and maintained scalable front-end architecture** for complex applications, prioritising reusable components, clear module boundaries and long-term maintainability.
- **Contributed to data model and REST API design** alongside back-end engineers, shaping contracts before implementation rather than consuming them after the fact.

- **Delivered enterprise projects with complex business requirements**, working across business analysis, application architecture, API communication and feature implementation.
- **Collaborated across technical teams** — back-end, analysis and stakeholders — to define technical direction for new products and major features, working **fully remotely** throughout.

Stack: Angular · TypeScript · RxJS · Component Architecture · REST APIs · Data Modelling · Pull Request Review · Branch Strategy · Task Decomposition · Team Leadership

SELECTED PROJECTS

IMIDRO — Enterprise Platforms

Iranian Mines & Mining Industries Development and Renovation Organization · Angular · TypeScript · REST APIs

A large-scale platform built for a national industrial organisation — extensive functionality with complex relationships spanning its modules, each domain carrying its own business rules, data model and reporting needs. Domains delivered: **HSE** (Health, Safety & Environment), **Energy** management, **Planning** & scheduling, **Productivity** monitoring, **HR** and an organisational **Phonebook**.

- Handled **business analysis and solution design** for assigned modules, translating operational requirements into concrete technical designs.
- Designed **data models and APIs** in collaboration with back-end engineers, then implemented the corresponding front-end integration layer.
- Developed the **front-end applications end to end** — architecture, reusable component structure, state management and feature implementation.
- Contributed to **overall application architecture**, working across business logic, data structures and API communication rather than UI alone.

Jazireh & Tinaco

Private / Commercial · Machine Parts Supply · Angular · TypeScript

Two Angular platforms for machine parts suppliers, each combining role-based access for multiple user types with a customer club and sales management.

- Implemented **role-based access across multiple user types**, with each role driving what is visible and permitted throughout the application.
- Built the **customer club** for managing and rewarding returning customers.
- Built **sales management** covering the supplier's commercial workflow.

Salary Slip Platform

Arman Carpet · Full-Stack · Next.js · TypeScript · MongoDB · salary.arman-carpet.com

Payroll platform giving the company's employees access to their salary slips. Built end to end — front end, back end and data model.

Invoice & Document Management

Product Supply Group · Full-Stack · Next.js · TypeScript · MySQL

Local web application for managing a product supply group's invoices and documents. Built end to end — front end, back end and data model.

Chelhesaran

Carpet Store · Full-Stack · Next.js · TypeScript · MongoDB · chelhesaran.com

Online store for a Kashan carpet brand, selling machine-made carpets direct to customers. Built end to end — front end, back end and data model.

Avak · Tamland Junior · Karabiz

Jabiz Parda · E-Learning · Angular · TypeScript · avak.ir · jr.tamland.ir · karabiz.com

- **Avak** — learning platform for mothers of newborn children, delivering structured educational content to a consumer audience.

- **Tamland Junior** — learning platform for pre-school children, built around an interface suited to a young, early-reader audience.
- **Karabiz** — online academy for building practical workplace skills, delivering skills-focused courses to working professionals.

EDUCATION

B.Sc. in Computer Engineering — Iran University of Science and Technology (IUST)

Sep 2019 — Sep 2025 · Tehran, Iran

Bachelor's thesis — Video Streaming over QUIC. Evaluated QUIC-based video streaming under varying network conditions and compared its behaviour against HTTP-based DASH streaming, analysing how each transport performed as network characteristics changed. Built the test environment with **Mininet on Linux** to emulate the network conditions under test.

CURRENT FOCUS

Expanding into AI-Assisted Engineering

Ongoing · Self-directed technical development

- Hands-on experience coding with **Claude Code**, **Cursor** and **OpenCode** as part of day-to-day development.
- Building practical experience with **AI-assisted software development** workflows.
- Working with **Python for AI development** and **LLM tooling**.
- Exploring **MCP (Model Context Protocol)** for integrating models with development tooling.

What I'm Looking For

Open · Remote or Hybrid

Senior Front-End Developer · Senior Angular Developer · Front-End Engineer · Full-Stack JavaScript / TypeScript · Front-End Lead / Technical Leadership — in engineering environments where architecture, code quality, scalability and development practice are genuinely valued.

- Large, complex applications where **architecture and maintainability** carry real weight.
- Teams that invest in **code review, standards and testing** as part of how they ship.
- Scope that spans **front end, API design and data modelling** rather than UI implementation alone.
- Working **remotely or hybrid** from Iran (UTC+3:30) — **flexible on working hours** and able to overlap any timezone a team works in.

LANGUAGES

- **Persian** — Native
- **English** — Professional working proficiency (B2)
