5+ years	Team of 5	9 products	B.Sc. CE
software engineering	front-end engineers led	delivered to production	Iran Univ. of Science & Tech.

SUMMARY

Senior Front-End Engineer and Team Lead with **5+ years** building **enterprise-scale web applications** in **Angular** and **React** with TypeScript, plus **full-stack delivery** in Next.js and Node.js. I lead a team of 5, own front-end architecture end to end, and set the coding standards, code-review process and release gates the team ships by. My edge is working across **architecture, API contracts and data models** — not only UI — to build products that stay maintainable as they scale.

SKILLS

Front-End	**Angular** (Standalone, Signals, OnPush), **React**, **Next.js**, **TypeScript**, JavaScript (ES2015+), **RxJS**, NgRx, HTML5, CSS3, Tailwind CSS, Angular Material, PrimeNG, PWA, Responsive Design
Back-End	Node.js, Express.js, Next.js (full-stack), REST API design, GraphQL, WebSockets, Server-Sent Events, Webhooks, Authentication & Authorization
Databases	SQL Server, PostgreSQL, MySQL, MongoDB
Tooling	Git, GitHub, Docker, Linux (Ubuntu), GraphQL Code Generator, D3.js, Three.js, Mininet
Practice	Software architecture, code review, coding standards, branch strategy, feature testing, data modelling, business analysis, technical leadership, mentoring
AI-Assisted	Claude Code, Cursor, OpenCode, MCP (Model Context Protocol), Python for LLM tooling

EXPERIENCE

Front-End Team Lead — Jabiz Parda

Nov 2021 – Present

Enterprise web applications · Remote · ~5 years

- **Lead a team of 5 front-end engineers** delivering large enterprise web applications, fully remote, owning everything from component architecture and state management to API contracts.
- **Architected a modular, scalable front end** — reusable components, clear module boundaries and shared conventions that keep complex applications maintainable as they grow.
- **Build with modern Angular** — standalone components, Signals, OnPush change detection and RxJS reactive patterns — for predictable, efficient UIs.
- **Co-design data models and REST APIs** with back-end engineers, agreeing contracts before implementation instead of adapting to them afterwards.
- **Set the team's engineering standards** — coding conventions, branch strategy and merge gates: work merges only with an approved PR and passing tests; features reach main only when complete.
- **Review every pull request** — code review is the team's main channel for mentoring and consistency.
- **Plan delivery** by splitting each feature into small, reviewable tasks distributed across the team.
- **Shape technical direction** for new products and major features with back-end, analysts and stakeholders, and own post-release feedback and defect triage.

FREELANCE EXPERIENCE

Senior Front-End Developer — Armani Team

2021 – Present

Freelance · part-time alongside Jabiz Parda · Jazireh & Tinaco machine-parts supplier platforms · Angular

- Implemented **role-based access control** for multiple user types — each role defines what users see and can do.
- Built a **customer loyalty club** and **sales management** covering the suppliers' commercial workflow.

Full-Stack Developer — Awin Team

2022 – 2023

Freelance · part-time alongside Jabiz Parda · Product: **KidooKAI**

SELECTED PROJECTS

IMIDRO — Enterprise Platform Suite

Angular · TypeScript

Iranian Mines & Mining Industries Development and Renovation Organization

Multi-domain enterprise platform for a national mining and industrial organisation, each domain with its own business rules, data model and reporting: **HSE**, **Energy**, **Planning & Scheduling**, **Productivity**, **HR** and an organisational **Phonebook**.

- Ran **business analysis and solution design**, turning operational requirements into technical designs.
- Designed **data models and APIs** with back-end engineers and built the front-end integration layer on top.
- Built the **front ends end to end** — architecture, reusable components, state and features.

Salary Slip Platform — Arman Carpet

Next.js · MongoDB

Full-stack · salary.arman-carpet.com

Employee self-service portal for viewing salary slips. Designed and built end to end — UI, API and data model.

Chelhesaran — Carpet E-Commerce Store

Next.js · MongoDB

Full-stack · chelhesaran.com

Direct-to-consumer store for a Kashan carpet brand. Built end to end — storefront, back end and data model.

Invoice & Document Management

Next.js · MySQL

Full-stack · Product supply group

Internal web app for managing a supply group's invoices and documents. Designed and built end to end.

Avak · Tamland Junior · Karabiz — E-Learning

Angular · TypeScript

Jabiz Parda · avak.ir · jr.tamland.ir · karabiz.com

Avak — learning for mothers of newborns · **Tamland Junior** — pre-school learning built for early readers · **Karabiz** — practical workplace-skills academy for professionals.

EDUCATION

B.Sc. Computer Engineering — Iran University of Science and Technology

2019 – 2025

IUST · Tehran, Iran

Thesis — Video Streaming over QUIC. Evaluated QUIC-based video streaming against HTTP-based DASH under varying network conditions, using a **Mininet on Linux** test environment to emulate them.

COURSES · CS INTERNSHIP

- **Human Communication** — Behzad Sadeghi
- **Introduction to Coaching** — Behzad Sadeghi

LOOKING FOR

- Senior Front-End Engineer or Front-End Lead
- **Remote or Hybrid** · flexible hours, any timezone

LANGUAGES

- **Persian** — Native
- **English** — Professional working proficiency (B2)
